

FDS - FIT3179 V2

🕒 Project	👤 FIT3179 Data Visualisation
📅 Due	@October 23, 2024 5:56 PM
⚙️ Status	Not started
📁 Type	Task

Description

Ideas

Data Avail:

- Income by Postcode (ATO)
- Vic or Aus?
- Can't do World?
- Income by Suburb/Area
- Dot Maps vs Choropleths?
- ATO Tax Dataset for Aus

(ABS)

Why?

- For policy enforcers
- For individuals who want to know where most income is generated from?

Pie chart for Income of Vic

generate using ABS Dataset?

Data Filter

- Use income by Postcode from ATO

• .geojson from Studio 10 of Vic

Victoria Suburbs / Postcodes

CATEGORIZE

- Map containing Income

Data of Aus

- Bar & Pie highlight ordering

Combine & Refine

MAP

BAR

TEXT

Pie

FDS Sheet 2 - Map - Allister in Aus

Layout

OPERATIONS

- Highlighting Income by State

- Zooming in and out toggle Button

- Use colour on the Map: Diverging or sequential

To highlight a difference in income using colour channel

Focus

- colour to highlight income
- Tool tips: Exact values
- Zoom and mouse navigation

Discussion

- Disadvantages:
Val using is combined Income. → Fix this by using Normalized values by no. individuals
- Adv: Navigable

FDS sheet 3 - Vic - Allister Lim Income

Layout

OPERATIONS

- Similar to state but focused on suburb data.

Tool tip

Total income: 999,999
Tax: 999,999
No.: 100

Colour channel B

- Will need more ranges b/c vals go from 5 digits to 9 digits.
- Becomes more complicated w/ Normalized vals, must ensure ranges are stable. ← Preprocess required.

→ copied from Studio 10: Ability to center around diff areas of Vic, not just Melb.

ie. geelong vs Melb CBD

Disadv: Many metrics...

- Need to toggle across diff types of income Metrics

Focus

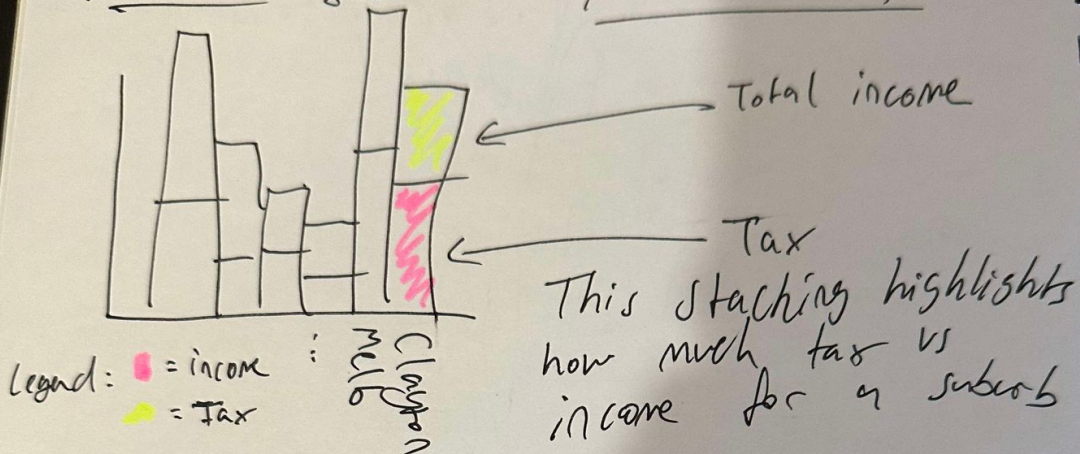

- centering around diff Areas
- Scaled vals for diff metrics.

Adv: shows suburb disparity well.

FDS sheet 4 - Bar/Line - Allister

[Layout] stacked Bar chart of suburbs

chart Lim
/OPERATIONS/

Legend for differentiating b/w values

[Focus:]

• This will focus on comparing diverging or opposite vals from dataset ie income vs Tax

[Discussion]

• Grouped or stacked
• Pie chart was not a good fit, since we want to compare vals.

FDS Sheet 5 - Realisation Design

Vic chloropleth Map

- R & Python for preprocessing as current
- csv from ATO only contains \$ by Post code.
- Geojson/Topojson taken from Vic Map in Q2 of studio10 (the house price in vic chloropleth)
- Use Vega lite of course, html, css, git ha.
- Time: 5 hours Data Pre process
5 hours Map
5 hours Bar
- Hardware: • M3 Mac
